授权委托书

江苏中能硅业科技发展有限公司（下称委托方）全权委托上海海华永泰（北京）律师事务所及其指定的律师，就原产于美国和韩国的进口太阳能级多晶硅所适用的反倾销和反补贴措施向中华人民共和国商务部对提起期终复审申请。

上海海华永泰（北京）律师事务所律师的代理权限为全权代理，具体为：

- 1、认真履行职责，及时依法保护委托方合法权益；
- 2、为期终复审事宜搜集和整理有关证据和材料；
- 3、起草期终复审申请书及相关文件；
- 4、代表委托方向商务部提交反倾销和反补贴期终复审的书面申请；
- 5、代表委托方向商务部提供相关证据和材料，并依法查阅与本案件有关的证据和材料；
- 6、代表委托方参加题述案件的审理和听证，发表陈述意见和/或针对其他利害关系方的观点提出抗辩意见，对调查机关发布的裁决和披露的信息发表评论；
- 7、如经中国政府和委托方同意，代表委托方参加中国政府与国外生产商（或出口商）可能进行的承诺和协商的谈判工作；
- 8、代表委托方按照商务部规定的时间提供补充材料；
- 9、代表委托方进行最终裁定做出前所需要的工作。

本授权书所规定的权限在授权事宜完成时终结，或委托方认为有必要结束授权时终结。授权终结时，与之相应的委托代理合同同时终止。

律 师 指 派 书

为中国太阳能级多晶硅产业对原产于美国和韩国的进口太阳能级多晶硅进行的反倾销和反补贴措施期终复审之目的，江苏中能硅业科技发展有限公司、新特能源股份有限公司、洛阳中硅高科技有限公司、新疆大全新能源股份有限公司、四川永祥多晶硅有限公司和亚洲硅业（青海）有限公司授权上海海华永泰（北京）律师事务所作为其全权代理人，代理题述案件的申请及调查工作。

上海海华永泰（北京）律师事务所根据上述委托，特指派本所吴必轩律师代理，处理与上述委托相关的全部事宜。

上海海华永泰（北京）律师事务所

2018年11月15日

关于中国太阳能级多晶硅产量情况的证明

根据我协会对中国太阳能级多晶硅企业生产情况的跟踪统计，特此提供
2015年至2018年9月期间的以下数据：

1、中国多晶硅总产量；

2、江苏中能硅业科技发展有限公司、新特能源股份有限公司、洛阳中硅高
科技有限公司、新疆大全新能源股份有限公司、四川永祥多晶硅有限公司和亚
洲硅业（青海）有限公司（以下合称“申请人”）的多晶硅总产量；

3、上述申请人总产量占全国总产量的比例。

	2015年	2016年	2017年	2018年1—9月
申请人产量(吨)	134,689	148,047	172,921	125,503
中国总产量(吨)	169,274	195,464	240,396	193,359
申请人产量占比	79.57%	75.74%	71.93%	64.91%

特此证明。

附件 5

附件 7

an eligible educational institution (as defined in section 529(e)(5)).

(e) Denial of double benefit

A credit shall not be allowed under this section for any qualified investment for which a credit is allowed under section 48A.

(f) Recapture of credit for failure to sequester

The Secretary shall provide for recapturing the benefit of any credit allowable under subsection (a) with respect to any project which fails to attain or maintain the separation and sequestration requirements for such project under subsection (d)(1).

(Added Pub. L. 109-58, title XIII, §1307(b), Aug. 8, 2005, 119 Stat. 1004; amended Pub. L. 110-343, div. B, title I, §112(a)-(e), Oct. 3, 2008, 122 Stat. 3824; Pub. L. 111-5, div. B, title I, §1103(b)(2)(D), Feb. 17, 2009, 123 Stat. 321.)

REFERENCES IN TEXT

The enactment of the Revenue Reconciliation Act of 1990, referred to in subsec. (b)(3), is the date of enactment of title XI of Pub. L. 101-508, which was approved Nov. 5, 1990.

The date of the enactment of this section, referred to in subsec. (d)(1), is the date of enactment of Pub. L. 109-58, which was approved Aug. 8, 2005.

AMENDMENTS

2009—Subsec. (b)(2). Pub. L. 111-5 inserted “(without regard to subparagraph (D) thereof)” after “section 48(a)(4)”.

2008—Subsec. (a). Pub. L. 110-343, §112(a), inserted “(30 percent in the case of credits allocated under subsection (d)(1)(B))” after “20 percent”.

Subsec. (c)(7)(H). Pub. L. 110-343, §112(e), added subpar. (H).

Subsec. (d)(1). Pub. L. 110-343, §112(b), substituted “shall not exceed—” for “shall not exceed \$350,000,000 under rules similar to the rules of section 48A(d)(4).” and added subpars. (A) and (B).

Subsec. (d)(4). Pub. L. 110-343, §112(d), added par. (4). Subsec. (f). Pub. L. 110-343, §112(c), added subsec. (f).

EFFECTIVE DATE OF 2009 AMENDMENT

Amendment by Pub. L. 111-5 applicable to periods after Dec. 31, 2008, under rules similar to the rules of section 48(m) of this title as in effect on the day before Nov. 5, 1990, see section 1103(c)(1) of Pub. L. 111-5, set out as a note under section 25C of this title.

EFFECTIVE DATE OF 2008 AMENDMENT

Pub. L. 110-343, div. B, title I, §112(f), Oct. 3, 2008, 122 Stat. 3824, provided that: “The amendments made by this section [amending this section] shall apply to credits described in section 48B(d)(1)(B) of the Internal Revenue Code of 1986 which are allocated or reallocated after the date of the enactment of this Act [Oct. 3, 2008].”

EFFECTIVE DATE

Section applicable to periods after Aug. 8, 2005, under rules similar to the rules of section 48(m) of this title, as in effect on the day before Nov. 5, 1990, see section 1307(d) of Pub. L. 109-58, set out as an Effective Date of 2005 Amendment note under section 46 of this title.

§ 48C. Qualifying advanced energy project credit

(a) In general

For purposes of section 46, the qualifying advanced energy project credit for any taxable year is an amount equal to 30 percent of the qualified investment for such taxable year with

respect to any qualifying advanced energy project of the taxpayer.

(b) Qualified investment

(1) In general

For purposes of subsection (a), the qualified investment for any taxable year is the basis of eligible property placed in service by the taxpayer during such taxable year which is part of a qualifying advanced energy project.

(2) Certain qualified progress expenditures rules made applicable

Rules similar to the rules of subsections (c)(4) and (d) of section 46 (as in effect on the day before the enactment of the Revenue Reconciliation Act of 1990) shall apply for purposes of this section.

(3) Limitation

The amount which is treated for all taxable years with respect to any qualifying advanced energy project shall not exceed the amount designated by the Secretary as eligible for the credit under this section.

(c) Definitions

(1) Qualifying advanced energy project

(A) In general

The term “qualifying advanced energy project” means a project—

(i) which re-equips, expands, or establishes a manufacturing facility for the production of—

(I) property designed to be used to produce energy from the sun, wind, geothermal deposits (within the meaning of section 613(e)(2)), or other renewable resources,

(II) fuel cells, microturbines, or an energy storage system for use with electric or hybrid-electric motor vehicles,

(III) electric grids to support the transmission of intermittent sources of renewable energy, including storage of such energy,

(IV) property designed to capture and sequester carbon dioxide emissions,

(V) property designed to refine or blend renewable fuels or to produce energy conservation technologies (including energy-conserving lighting technologies and smart grid technologies),

(VI) new qualified plug-in electric drive motor vehicles (as defined by section 30D), qualified plug-in electric vehicles (as defined by section 30(d)), or components which are designed specifically for use with such vehicles, including electric motors, generators, and power control units, or

(VII) other advanced energy property designed to reduce greenhouse gas emissions as may be determined by the Secretary, and

(ii) any portion of the qualified investment of which is certified by the Secretary under subsection (d) as eligible for a credit under this section.

(B) Exception

Such term shall not include any portion of a project for the production of any property

which is used in the refining or blending of any transportation fuel (other than renewable fuels).

(2) Eligible property

The term “eligible property” means any property—

(A) which is necessary for the production of property described in paragraph (1)(A)(i),

(B) which is—

(i) tangible personal property, or

(ii) other tangible property (not including a building or its structural components), but only if such property is used as an integral part of the qualified investment credit facility, and

(C) with respect to which depreciation (or amortization in lieu of depreciation) is allowable.

(d) Qualifying advanced energy project program

(1) Establishment

(A) In general

Not later than 180 days after the date of enactment of this section, the Secretary, in consultation with the Secretary of Energy, shall establish a qualifying advanced energy project program to consider and award certifications for qualified investments eligible for credits under this section to qualifying advanced energy project sponsors.

(B) Limitation

The total amount of credits that may be allocated under the program shall not exceed \$2,300,000,000.

(2) Certification

(A) Application period

Each applicant for certification under this paragraph shall submit an application containing such information as the Secretary may require during the 2-year period beginning on the date the Secretary establishes the program under paragraph (1).

(B) Time to meet criteria for certification

Each applicant for certification shall have 1 year from the date of acceptance by the Secretary of the application during which to provide to the Secretary evidence that the requirements of the certification have been met.

(C) Period of issuance

An applicant which receives a certification shall have 3 years from the date of issuance of the certification in order to place the project in service and if such project is not placed in service by that time period, then the certification shall no longer be valid.

(3) Selection criteria

In determining which qualifying advanced energy projects to certify under this section, the Secretary—

(A) shall take into consideration only those projects where there is a reasonable expectation of commercial viability, and

(B) shall take into consideration which projects—

(i) will provide the greatest domestic job creation (both direct and indirect) during the credit period,

(ii) will provide the greatest net impact in avoiding or reducing air pollutants or anthropogenic emissions of greenhouse gases,

(iii) have the greatest potential for technological innovation and commercial deployment,

(iv) have the lowest levelized cost of generated or stored energy, or of measured reduction in energy consumption or greenhouse gas emission (based on costs of the full supply chain), and

(v) have the shortest project time from certification to completion.

(4) Review and redistribution

(A) Review

Not later than 4 years after the date of enactment of this section, the Secretary shall review the credits allocated under this section as of such date.

(B) Redistribution

The Secretary may reallocate credits awarded under this section if the Secretary determines that—

(i) there is an insufficient quantity of qualifying applications for certification pending at the time of the review, or

(ii) any certification made pursuant to paragraph (2) has been revoked pursuant to paragraph (2)(B) because the project subject to the certification has been delayed as a result of third party opposition or litigation to the proposed project.

(C) Reallocation

If the Secretary determines that credits under this section are available for reallocation pursuant to the requirements set forth in paragraph (2), the Secretary is authorized to conduct an additional program for applications for certification.

(5) Disclosure of allocations

The Secretary shall, upon making a certification under this subsection, publicly disclose the identity of the applicant and the amount of the credit with respect to such applicant.

(e) Denial of double benefit

A credit shall not be allowed under this section for any qualified investment for which a credit is allowed under section 48, 48A, or 48B.

(Added Pub. L. 111-5, div. B, title I, § 1302(b), Feb. 17, 2009, 123 Stat. 345.)

REFERENCES IN TEXT

Subsections (c)(4) and (d) of section 46 (as in effect on the day before the enactment of the Revenue Reconciliation Act of 1990), referred to in subsec. (b)(2), means section 46(c)(4) and (d) as in effect before enactment of Pub. L. 101-508, which amended section 46 generally.

The date of enactment of this section, referred to in subsec. (d)(1)(A), (4)(A), is the date of enactment of Pub. L. 111-5, which was approved Feb. 17, 2009.

EFFECTIVE DATE

Section applicable to periods after Feb. 17, 2009, under rules similar to the rules of section 48(m) of this title as in effect on the day before Nov. 5, 1990, see section 1302(d) of Pub. L. 111-5, set out as an Effective Date of 2009 Amendment note under section 46 of this title.

Search

The White House

Office of the Press Secretary

For Immediate Release

January 08, 2010

Fact Sheet: \$2.3 Billion in New Clean Energy Manufacturing Tax Credits

President Obama announced awardees of the [clean energy manufacturing tax credit](#) in the American Recovery and Reinvestment Act.

In order to foster investment and job creation in clean energy manufacturing, the American Recovery and Reinvestment Act included a [tax credit for investments in manufacturing facilities for clean energy technologies](#). The [Section 48C program will provide a 30 percent tax credit for investments in 183 manufacturing facilities for clean energy products across 43 states](#).

This tax credit program will help build a robust high technology, US manufacturing capacity to supply clean energy projects with US made parts and equipment. These manufacturing facilities should also support significant growth in US exports of US manufactured clean energy products.

The \$2.3 billion in tax credits is being allocated on a competitive basis. Projects are assessed based on the following criteria: commercial viability, domestic job creation, technological innovation, speed to project completion, and potential for reducing air pollution and greenhouse gas emissions. The Department of Energy also considered additional factors including diversity of geography, technology and project size, and regional economic development.

The program is currently capped at \$2.3 billion in tax credits and was oversubscribed by a ratio of more than 3 to 1, reflecting a deep pipeline of high quality clean energy manufacturing opportunities in the U.S. These tax credits for clean energy manufacturing will help rebuild domestic manufacturing and bring private capital off the sidelines.

With this announcement, IRS has certified applications posted [HERE](#), and notified the certified projects with the approved amount of their tax credit. Awardees will receive acceptance agreements from the IRS by April 16, 2010. Credits will be allocated until the program funding (\$2.3 billion) is exhausted. Subsequent allocation periods will depend on remaining funds.

Estimated Jobs Impact and Timeline of the 48C Manufacturing Tax Credits:

Recovery Act investments of up to \$2.3 billion for advanced energy manufacturing facilities will generate more than 17,000 jobs. This investment will be matched by as much as \$5.4 billion in private sector funding likely supporting up to 41,000 additional jobs.

Timing of Projects:

The statute authorizing the 48C tax credits allows projects that are completed on or after February 17, 2009, when the Recovery Act was signed. Projects must be commissioned before February 17, 2013. The statute favors the selection of projects that are in service early. As a result, some of the selected projects already have been completed and begun operation.

Applicant Pool:

The application deadline for the 48C program was October 16, 2009. Over 500 applications were received with tax credit requests totaling over \$8 billion. The 48C applications pool was distributed across many clean energy technologies and was geographically distributed to more than 40 states.

Qualifying manufacturing facilities included the production of a wide range of clean energy products:

- Solar, wind, geothermal, or other renewable energy equipment
- Electric grids and storage for renewables
- Fuel cells and microturbines
- Energy storage systems for electric or hybrid vehicles
- Carbon dioxide capture and sequestration equipment

STAY CONNECTED

- Equipment for refining or blending renewable fuels
- Equipment for energy conservation, including lighting and smart grid technologies
- Plug-in electric vehicles or their components, such as electric motors, generators, and power control units
- Other advanced energy property designed to reduce greenhouse gas emissions may also be eligible as determined by the Secretary of the Treasury.

The statutorily specified review criteria included:

- Greatest domestic job creation (direct and indirect)
- Greatest net impact in avoiding or reducing air pollutants or emissions of greenhouse gases; lowest levelized cost of energy
- Greatest potential for technological innovation and commercial deployment
- Shortest project time from certification to completion

Expanded Support for 48C Tax Credits to Accelerate Manufacturing Job Creation:

Because the 48C program generated far more interest than anticipated, DOE and Treasury have a substantial backlog of technically acceptable applications. Instead of turning down worthy applicants who are willing to invest private resources to build and equip factories that manufacture clean energy products in America, the Administration has called on Congress to provide an additional \$5 billion to expand the program. Because there is already an existing pipeline of worthy projects and substantial interest in this area, these funds will be deployed quickly to create jobs and support economic activity. In doing so, the Administration will employ new approaches to ensure that we maximize private investment for every dollar we invest.

SELECTIONS FOR SECTION 48C MANUFACTURING TAX CREDIT

Tax Credit Requested							Applicant Name		Technology Area			Facility City		Facility State		HQ City		HQ State		Updated Descriptions	
AAF-McQuay, Inc.							\$ 570,000		Buildings			Columbia		MO		Louisville		KY		AAF will re-equip its manufacturing facility to establish a versatile mini-pleating and assembly process that is capable of making polytetrafluoroethylene (PTFE) and other synthetic media air filters for the ASHRAE (American Association of Heating, Refrigeration, and Air-Conditioning Engineers) and HEPA (high efficiency particulate air) markets. The end result will be a new product family of air filtration products to achieve lowest air pressure drop.	
AAF-McQuay, Inc.							\$ 1,374,300		Buildings			Fairbault		MN		Louisville		KY		AAF will re-equip a manufacturing facility for the production of rooftop air-conditioning systems used on Heating, Ventilation, and Air-Conditioning (HVAC) systems.	
Abound Solar, Inc.							\$ 774,937		Buildings			Verona		VA		Verona		VA		Abound Solar will expand facility capacity with an additional manufacturing facility. The chillers are significantly more energy-efficient than those currently on the market.	
Acuity Brands, Inc.							\$ 12,600,000		Solar PV			Longmont		CO		Longmont		CO		Acuity Brands will re-equip an existing facility with equipment used in the production of energy-saving lighting sensors. Sensors are used in lighting applications to control light levels based on occupancy and are used in daylighting systems.	
Acuity Brands, Inc.							\$ 225,000		Buildings			Wallingford		CT		Wallingford		CT		Acuity Plans to manufacture three energy-efficient LED luminaire outdoor products in its production facility. Lighting fixtures that include light-emitting diode ("LED") technologies can dramatically reduce energy consumption while reducing maintenance costs associated with the luminaire due to longer product lifetimes.	
Acutemp							\$ 547,087		Buildings			Crawfordsville		IN		Crawfordsville		IN		Acutemp will purchase equipment for a six-fold increase in manufacturing of high performance Vacuum Insulation Panels for residential refrigerators. The panels are used in high efficiency Energy Star appliances.	
Advanced Energy Industries, Inc.							\$ 1,230,000		Components and Materials			Ft. Collins		CO		Ft. Collins		CO		Advanced Energy Industries plans to establish a manufacturing facility for the production of commercial and utility-scale solar inverters. Inverters are used to integrate solar PV installations.	
Aeroenvironment, Inc							\$ 310,800		Battery			Monrovia		CA		Monrovia		CA		Aeroenvironment plans to manufacture a patent pending Mobile Charger that combines a battery pack with a Level 3 DC connector. It is designed for on-road service trucks to provide a quick charge to stranded battery electric vehicles similar to an 'out-of-gas' situation.	
Aircharge Inc.							\$ 369,600		Battery			Monrovia		CA		Monrovia		CA		Aeroenvironment plans to purchase equipment for manufacturing 25kWh LiTO advanced battery packs and battery management systems.	
Alstom Inc. and Subsidiaries							\$ 920,870		Buildings			Rockland		MA		Rockland		MA		Aircharge will expand its facility to produce Enthalpy/Energy Recovery Wheels (ERWs) that recycle up to 80% of previously exhausted energy in building exhaust air. The products allow preconditioning of incoming outdoor air 5-7 times more efficiently than conventional heating and airconditioning systems reducing design heating, cooling, humidification and dehumidification loads and conserving energy summer and winter.	
Amonix, Inc							\$ 63,000,000		Nuclear			Chattanooga		TN		Windsor		CT		Alstom will establish a new turbine manufacturing facility designed to manufacture the world's largest steam turbines, with unit output up to 1700 MW. The new facility will focus on turbines used in advanced nuclear power plants, retrofitting existing turbines in nuclear power plants with higher efficiency technologies, turbines in new hydro power plants, and retrofitting existing turbines in hydro power plants with higher efficiency technologies.	
American Railcar Industries							\$ 3,654,096		Wind Towers			Marmaduke		AR		Fort Dodge		IA		The Alstom assembly factory will produce and assemble the complete nacelle for wind turbines including hub, gearbox frames, generator, electrical converter, etc. for its 60-hz North American product line. This product line is comprised of two wind turbine platforms; the ECO80 (1.67MW) and the larger ECO 100 (3.0MW).	
American Railcar Industries							\$ 5,347,464		Wind Towers			Fort Dodge		IA		Fort Dodge		IA		American Railcar Industries will re-equip a manufacturing plant for the production of 500 structural steel towers per year for large-scale commercial wind turbines used to generate wind energy.	
Brevini Wind USA, Inc.							\$ 3,629,988		Solar PV			Phoenix		AZ		Phoenix		AZ		American Railcar Industries will re-equip a rail car manufacturing plant for the production of 500 structural steel towers per year for large-scale commercial wind turbines.	
Applied Photovoltaics, LLC							\$ 1,068,986		Solar PV			Las Vegas		NV		Las Vegas		Amonix will manufacture low-cost solar electricity systems using inexpensive plastic lenses that concentrate sunlight. The systems generate 500 times more solar electric power from small, high efficiency solar cells.			
Bassett, Inc. (dba Bassett Mechanical)							\$ 868,500		Wind Turbines			Kaukauna		WI		Kaukauna		Bassett Inc. will manufacture solar energy modules for use in building integrated photovoltaics.			
Bassett, Inc. (dba Bassett Mechanical)							\$ 75,000		CCS			Kaukauna		WI		Kaukauna		Bassett Inc. will manufacture wind turbine towers (for 100-1,000 kW turbines) and foundation components for all sizes of turbines.			
Brevini Wind USA, Inc.							\$ 12,750,000		Wind Turbines			Yorktown		IN		Muncie		IN		Brevini Wind will establish a new manufacturing facility that will produce Main Drive Gear Boxes for wind turbine manufacturers. The product allows servicing of the gear box without the use of heavy lifting equipment to remove the entire gearbox from the wind turbine.	

CalSolar, Inc.	\$ 51,563,980	Solar CSI	Sunnyvale	CA	Sunnyvale	CA	CalSolar will build a new manufacturing facility to process silicon feedstock into finished solar cells.
CalStar Products	\$ 2,443,547	Industrial	Caledonia	WI	Caledonia	WI	CalStar Products will manufacture bricks and pavers from coal power plant fly ash. The process uses 88% less energy than traditional "fired" clay products, while avoiding the CO2 emission associated with concrete, and makes beneficial use of fly ash.
Cardinal Fastener & Specialty Co	\$ 480,000	Wind Turbines	Bedford	OH	Bedford Hts.	OH	Cardinal Fastener & Specialty will manufacture hot forged, critical fasteners used in wind turbines - transportation bolts, tower bolts, nacelle bolts, and blade studs
Centrosolar Oregon LLC	\$ 4,740,000	Solar CSI	Gresham	OR	Gresham	OR	Centrosolar Oregon LLC plans to build a manufacturing plant for PV solar modules based on crystalline silicon cells.
CertainTeed Corporation	\$ 1,012,500	Buildings	Norwood	MA	Norwood	MA	CertainTeed will manufacture residential cool shingles that meet or exceed Energy Star criteria and are LEED qualified. The high-solar reflecting shingles will reduce electricity for cooling, reduce GHG, and smog formation, while maintaining aesthetically pleasing colors.
Climate Master Inc.	\$ 8,941,626	Geo/Buildings	Oklahoma City	OK	Oklahoma City	OK	Climate Master will expand the capacity of existing manufacturing facilities that produce water-source heat pumps (WSHP), the core technology used in geothermal heat pump systems. Geothermal heat pumps allow high efficiency space heating and cooling.
Coolerado Corporation	\$ 750,000	Buildings	Denver	CO	Denver	CO	Coolerado will manufacture commercial and residential air conditioning units that use a heat exchanger incorporating an innovative thermodynamic cycle to cool the air. The patented process creates a healthier, more comfortable living environment while significantly reducing energy costs.
Cooper Power Systems, LLC	\$ 495,510	Smart Grid	Nacogdoches	TX	Nacogdoches	TX	Cooper Power Systems' new facility will produce electrical transformers with amorphous steel cores. Amorphous steel core transformers provide 70% lower no-load losses than normal steel transformers.
Cooper Power Systems, LLC	\$ 846,180	Smart Grid	Waukesha	WI	Waukesha	WI	Cooper Power Systems' new facility will be producing high efficiency transformers. The basis of Cooper's high efficiency technology lies with the higher grade of steel used to produce the core and coil of the transformer. Cooper utilizes the proper grade and quantity of silicon grain oriented steel in their manufacturing process to create a higher efficiency product.
Cree Inc.	\$ 39,087,000	Buildings	Durham	NC	Durham	NC	Cree will purchase new equipment to add capacity and capability to lower production costs of LED chips and fixtures. LED lighting technologies represent a new source of high efficiency lighting.
Dow Corning - Solar Silane	\$ 27,300,000	Solar PV	Hemlock	MI	Hemlock	MI	Dow Corning - Solar Silane will build a new monosilane facility with 60% of production dedicated to the solar PV market. Monosilane is a key component in the production of amorphous thin-film solar panels.
Ductmate Industries, Inc.	\$ 192,000	Buildings	Tulsa	OK	Tulsa	OK	Ductmate will expand manufacturing and tooling capabilities for the production of energy efficient HVAC ductwork featuring self-sealing fixtures.
Ductmate Industries, Inc.	\$ 82,500	Buildings	Monongahela	PA	Monongahela	PA	Ductmate will expand manufacturing and tooling capabilities for the production of energy efficient HVAC ductwork featuring self-sealing fixtures.
E.I. du Pont de Nemours and Co.	\$ 50,730,000	Solar PV	Circleville	OH	Wilmington	DE	DuPont will expand production of high-performance polyvinyl fluoride films. These films are used to produce the critical protective backsheet component of solar photovoltaic modules.
Eagle Claw Fabrication LLC	\$ 4,372,800	Wind Towers	Muskogee	OK	Muskogee	OK	Eagle Claw will manufacture large wind turbine towers, a component piece of wind turbine systems used to generate electricity from wind energy. Towers are typically 250 to 400 feet tall and are composed of sections approximately 100 feet long that weigh 50 tons.
Ener-G-Rotors, Inc.	\$ 834,000	Industrial	Schenectady	NY	Schenectady	NY	Ener-G-Rotors will install manufacturing capacity to build systems that turn low temperature heat from industrial processes, from 180°F to 240°F, into 50kW of electricity.
EnerTech, Inc.	\$ 157,500	Wind Turbines	Newton	KS	Newton	KS	EnerTech will expand its manufacturing plant to accommodate development, fabrication, and assembly of two new small-scale wind turbine models using innovative blade design and fabrication processes.
FAFCO, INC.	\$ 214,500	Solar Hot Water	Chico	CA	Chico	CA	FAFCO will develop a next generation low cost, polymer based solar hot water heating system for homes. The complete system in a box will be low cost and easy to install.
First Solar, Inc.	\$ 16,320,000	Solar PV	Perryberg	OH	Perryberg	AZ	First Solar will expand its manufacturing facility to produce fully completed thin-film solar modules. The solar modules are manufactured using a thin film of cadmium telluride (CdTe) as a semi-conductor material, which converts sunlight to electricity more efficiently than traditional crystalline silicon semi-conductor material.
Flabeg Solar U.S. Corporation	\$ 10,187,618	Solar CSP	Clinton	PA	Clinton	PA	Flabeg Solar U.S. Corporation will produce high-temperature solar thermal mirrors for concentrating solar power plants. The facility will produce both bent and flat mirrors for parabolic trough and power tower solar plants. Flame Metals will purchase equipment used in heat treatment of gears for the gear assembly used in wind turbines.
Flame Metals Processing	\$ 1,350,000	Wind Turbines	Rogers	MI	Rogers	MN	Flame Metals will purchase equipment used in heat treatment of gears for the gear assembly used in wind turbines.
General Electric Company - Appliances	\$ 8,700,000	Industrial	Louisville	KY	Louisville	KY	GE will redevelop a manufacturing facility to produce Energy Star compliant heat pump electric water heaters that significantly improve energy efficiency compared to a traditional tank water heater.
General Electric Consumer & Industrial	\$ 6,491,160	Buildings	Decatur	AL	Decatur	AL	GE will purchase machinery and equipment to produce efficient refrigerators, resulting in greenhouse gas reductions and energy savings.
General Electric Gas Turbines (Greenville) LLC	\$ 26,862,000	Industrial	Greenville	SC	Greenville	SC	GE will manufacture its 7FA+ heavy-duty gas turbines that will deliver greater output and efficiency. The turbine will help reduce GHG emissions, while maintaining leadership in reliability, availability, and the operational flexibility that power generators need to achieve greater revenues in cyclic and peaking operations.
General Electric Lighting, Inc.	\$ 19,831,680	Buildings	Bucyrus	OH	East Cleveland	OH	GE will re-equip a lamp plant to manufacture energy conserving T8 and T5 linear fluorescent lamps and HID lamps. These lamps will primarily replace less efficient T-12 linear fluorescent lamps and HID lamps.

GEMX Technologies LLC	\$ 25,500,000	Battery Industrial	Schenectady Louisville	NY KY	Schenectady Louisville	NY KY	GEMX will re-equip an existing manufacturing facility. The facility will produce sodium metal halide batteries for various markets, including electricity grid support and regulation services to help support renewable energy penetration levels, enable remote power systems based on renewable energy sources, and help increase efficiency by reduced peak power demands.
General Electric	\$ 4,800,000						GE will re-equip a facility to manufacture new Energy Star compliant appliances – specifically, Ultra-high Efficient Dishwashers. This new dishwasher line will exceed the future, anticipated ENERGY STAR standards for residential dishwashers and be designed to plug into the "smart grid" to effectively manage peak electrical demand.
General Electric Company	\$ 11,304,900	Buildings	Louisville	KY	Louisville	KY	GE Aviation will purchase machinery and equipment that will be used to manufacture the new GENx aircraft engine. The GENx engine will significantly reduce greenhouse gas emissions and reduce the annual fuel consumption for its operators.
Great Lakes Industry, Inc	\$ 11,860,058	Industrial	Rutland	VT	NA	NA	Great Lakes Industry will manufacture component precision gears for multi-megawatt wind turbine gearboxes. Nearly all multi-megawatt wind turbines use highly efficient gearboxes to drive electrical generator(s) inside the turbine nacelle.
GreenRay, Inc.	\$ 180,000	Solar Components and Materials	Westford	MA	Westford	MA	GreenRay will manufacture a simplified "plug and play" AC solar electricity system for residential rooftops. Guardian Automotive will re-equip an existing manufacturing facility for the purpose of producing bent solar mirrors. This project will double production capabilities to create 1 million bent solar mirrors annually to support the concentrating solar power industry.
Guardian Automotive Products Inc.	\$ 3,375,000	Solar CSP	Auburn	IN	Auburn	IN	Guardian Automotive will re-equip an existing manufacturing facility to produce solar bent mirrors. The company will use new equipment to add the reflective coating to flat glass prior to bending to achieve the optimal reflective performance demanded by solar field developers.
Guardian Automotive Products Inc.	\$ 525,000	Solar CSP	Auburn	IN	Auburn	IN	Guardian Automotive will re-equip existing manufacturing facilities to produce solar bent windscreens into the solar industry.
Guardian Automotive Products, Inc.	\$ 1,249,800	Solar CSP	Auburn	IN	Auburn	IN	Guardian Industries will expand production for an existing facility to produce unique low iron pattern glass used in solar applications. Once completed, this facility would be the only US owned manufacturer of solar low iron pattern glasses in North America and would enable the production of more than 600MW of crystalline silicon modules.
Guardian Industries Corp.	\$ 2,707,560	Solar CSP	Carleton	MI	Carleton	MI	Guardian Industries will re-equip an existing manufacturing facility to produce bent solar mirrors. The project will modify and enhance the existing mirror line to enable the facility to mirror glass in a single throughput on the production line, while at the same time achieving a multi-layer specialized paint coating to protect and preserve the reflective layers of copper and silver. Preservation of these reflective layers is critical to the development of thin film solar mirrors.
Hemlock Semiconductor Corp.	\$ 141,870,000	Solar Components and Materials	Hemlock	MI	Hemlock	MI	Hemlock Semiconductor will expand a manufacturing plant that produces polycrystalline-silicon used in the production of solar panels. The plants, when fully operational, will produce 19,200 metric tons per year.
Hexcel Corporation	\$ 8,139,510	Wind Blades	Windsor	CO	Windsor	CO	Hexcel Corporation will establish technically advanced manufacturing facility to produce high performance epoxy, glass, and carbon fiber composite materials. The composites will be used in the manufacture of wind turbine blades.
Ice Energy, Inc.	\$ 1,508,973	Smart Grid Buildings	Hammondspor	NY	Windsor	CO	Ice Energy will expand a facility to design and manufacture energy storage modules for use with direct expansion air conditioners commonly found in commercial and small industrial applications. When deployed, the asset enables the storage of electricity from renewable energy resources in the form of ice.
illumisys, Inc.	\$ 1,305,480		Troy	MI	Troy	MI	illumisys will automate manufacture of LED replacements for fluorescent lighting.
Ingeteam Inc.	\$ 1,665,299	Wind Turbines	Milwaukee	WI	Milwaukee	WI	Ingeteam Inc. will manufacture wind turbine generators in various technologies, including PMG, DFM, XDFM. They will also manufacture power converter and control systems for both the wind and solar industry.
Iron	\$ 5,151,000	Smart Grid	West Union	SC	West Union	SC	Iron plans to re-equip an existing facility to produce the OpenWay CENTRON meter, a fully interoperable, solid-state smart meter with a built-in, two-way communications path and integrated remote on/off switch. The CENTRON meter is the first advanced meter for the residential market providing open-standards architecture, modular design for communications flexibility, and extensive functionality to support smart grid infrastructure.
Johnson Plate & Tower Fabrication, Inc.	\$ 2,385,494	Wind Towers	Santa Teresa	NM	Santa Teresa	NM	Johnson Plate & Tower Fabrication will establish and design a facility to manufacture commercial wind towers. The facility will produce property that, after further manufacturing, will become Specified Advanced Energy Property used in the production of energy from wind resources.
Johnson Plate & Tower Fabrication, Inc.	\$ 1,421,852	Wind Towers	Canutillo	TX	Canutillo	TX	Johnson Plate & Tower Fabrication, Inc. will re-build a facility to manufacture commercial wind towers to be used ultimately with turbines to generate renewable energy.
Kaydon	\$ 1,774,800	Wind Turbines	Milwaukee	WI	Ann Arbor	MI	Kaydon will apply the tax credits to re-equip and expand an existing manufacturing facility to produce "critical pitch and yaw" bearings used in the production and assembly of wind energy turbines.
Martifer-Hirschfeld Energy Systems LLC	\$ 3,474,269	Wind Towers	San Angelo	TX	San Angelo	TX	Martifer-Hirschfeld Energy Systems LLC will develop a factory for the production of steel towers for wind turbine generators. This evolution will allow the wind tower plant to achieve considerable gains in terms of efficiency and in production times.

Merrill Technologies Group	\$ 22,021,500	Wind Towers	Saginaw	MI	Saginaw	MI	Merill Technologies Group will invest \$7.3 million in advanced manufacturing equipment to support the production of nacelles for Northern Power's new 2.2 MW utility-scale wind turbine. Project will progress through prototype and pilot phases into serial production.
Metglas, Inc.	\$ 4,880,000	Smart Grid	Conway	SC	Conway	SC	Metglas, Inc. will purchase equipment for a casting expansion to increase domestic production of amorphous metals that form the core of the most energy efficient transformers. The equipment will reduce the amount of lost electricity due to transformer distribution losses.
Missole	\$ 10,450,200	Solar PV	Santa Clara	CA	Santa Clara	CA	Missole will manufacture Solar PV Cells and modules based on an innovative thin-film production technology. These Solar PV Cells will drive down the costs of renewable clean electricity generation.
Missole	\$ 91,350,000	Solar PV	Santa Clara	CA	Santa Clara	CA	Missole will manufacture Solar PV Cells and modules based on an innovative thin-film production technology. These Solar PV Cells will drive down the costs of renewable clean electricity generation.
Mitsubishi Power Systems Americas, Inc.	\$ 5,100,000	Wind Turbines	Fort Smith	AR	Fort Smith	AR	Mitsubishi Power Systems Americas, Inc. will create a new facility that will manufacture nacelles for 2.4MW wind turbines. These nacelles will be used for the production of wind energy.
Monogram Refrigeration, LLC	\$ 7,257,882	Buildings	Selmer	TN	Selmer	TN	Monogram Refrigeration, LLC will install newly purchased machinery and equipment to produce both Energy Star-qualified and non-Energy Star qualified refrigerators. The creation of these energy efficient appliances will result in a reduction of energy usage.
Nanosolar	\$ 43,453,309	Solar PV	San Jose	CA	San Jose	CA	Nanosolar will factory produce tools for the manufacturing of low-cost, low-GHG emission solar cells, using nanotechnology-enabled roll-to-roll processes. Tools enable high throughput production steps, including printing of electronic ink, annealing, various deposition steps, cell assembly, and quality control and testing of structural and functional properties of product.
Nordex USA Inc	\$ 22,153,500	Wind Turbines	Jonesboro	AR	Jonesboro	AR	Nordex USA, Inc. will build its first facility for wind turbines. This project will use renewable energy and will help build wind turbines to generate renewable energy.
Nordic Windpower	\$ 3,000,000	Wind Turbines	Pocatello	ID	Pocatello	ID	Nordic Windpower will establish manufacturing operations for an innovative wind turbine technology that uses two blades and a patented teeter-hub technology that dampens loads. The end product will result in a lightweight turbine that is at least 10% less costly to manufacture, install, operate and maintain than competing systems for renewable wind energy production.
Novozymes Blair, Inc.	\$ 28,401,000	Biomass	Blair	NE	Blair	NE	Novozymes Blair, Inc. will install equipment at a new manufacturing facility to produce biocatalysis (enzymes) used in manufacturing cellulosic ethanol from corn stover by the biochemical platform (biomass pretreatment, enzymatic hydrolysis, fermentation, distillation). These biocatalysts will aid the production of biofuels as a renewable energy source.
Pacific Metal Fab, LLC	\$ 303,801	Solar Hot Water - This panel May move with timing	Eugene	OR	Eugene	OR	Pacific Metal Fab, LLC will re-equip and expand its manufacturing facility to produce components for passive solar water heaters, specifically tanks, plumbing modules, and the frames that hold them. These components will promote greater energy efficiency in appliances.
Porocel Industries, LLC	\$ 2,880,000	Battery	Little Rock	AR	Cincinnati	OH	Porocel Industries, LLC will construct and operate a plant for drying, grinding, calcining, and packaging process steps for the production of intermediate material used in the production of Conoco Phillips' CPreme® Anode. The result will aid in competitive domestic battery manufacturing capability.
PPG Industries, Inc.	\$ 267,476	Solar PV	Mt. Zion	PA	Mt. Zion	PA	PPG Industries will manufacture a Transparent Conductive Oxide (TCO) coating for glass to be used as a substrate to construct photovoltaic solar cells. The result will aid in competitive domestic solar PV panel manufacturing.
PPG Industries, Inc.	\$ 149,100	Solar PV	Carlisle	PA	Carlisle	PA	PPG Industries will produce a durable anti-reflective coating for glass that will permit increased light transmittance in solar modules. The result will aid in competitive domestic solar PV panel manufacturing.
PPG Industries, Inc.	\$ 1,260,000	Vehicles	Lake Charles	LA	Lake Charles	LA	PPG Industries will manufacture Hi-Sil 190 G and Hi-Sil HDP 320 G, highly dispersible silica and to sell to tire manufacturers. The product, when incorporated into the tire rubber, will create a tire with reduced rolling resistance. The resulting product will increase vehicle fuel efficiency.
Premium Power	\$ 3,000,000	Smart Grid	North Reading	MA	North Reading	MA	Premium Power will establish a manufacturing facility to produce its proprietary Zinc-Flow® advanced renewable energy storage systems. The technology will deliver high energy storage density, long product life, and deep discharge capability for use in SmartGrid.
Ramgen Power Systems, LLC	\$ 4,767,438	CCS	Orlean	NY	Bellevue	WA	Ramgen Power Systems, LLC will produce a CO2 compressor capable of converting coal plant CO2 into a supercritical fluid that can be sequestered. The result is projected to be more efficient and cost-effective for Carbon Capture and Storage.
Reflectech, Inc.	\$ 750,000	Solar CSP	Arvada	CO	Arvada	CO	Reflectech, Inc will manufacture Mirror Faces made with ReflectTech® Mirror Film which will reflect sunlight onto the receivers of Parabolic Trough Concentrating Solar Power (CSP) collector systems. Faces will match or exceed the optical and structural characteristics of the existing glass mirrors, but will aim to be more cost efficient and durable. The end product will aid domestic solar power production.
RE-Gen LLC	\$ 903,480	Biomass	Millinocket	ME	Rockport	ME	RE-Gen will build a factory to produce Biomass Gasification Furnaces with a capacity of 250 systems/year. The result will aid the domestic biofuels industry while promoting energy efficiency.
Ringdale, Inc.	\$ 450,000	Buildings	Georgetown	TX	Georgetown	TX	Ringdale will purchase equipment to expand production capacity of commercial LED lighting and advanced lighting controls technology. The results will address outdoor, street, area lights, and indoor recessed down-lights, and will promote greater energy efficiency.

Rioglass Solar Inc	\$ 10,692,000	Solar CSP	Surprise	AZ	Berkeley	CA	Rioglass Solar Inc will manufacture tempered glass parabolic mirrors designated for use in concentrated solar power plants. The placement of the mirrors is specifically integrated to derive maximum electrical production from the sun. The resulting technologies will aid domestic solar panel production.
Rogers Foam Automotive Corporation	\$ 300,000	Battery	Flint	MI	Flint	MI	Rogers Foam Automotive Corporation will manufacture a component to be used in the thermal management system of lithium ion battery assemblies for electrical vehicles. This subcomponent consists of an outer gasket, which locates the component in the assembly, a multi-layer pressure conformable membrane which provides the constant pressure and a bonding agent, which attaches the outer gasket and membrane. The resulting product will aid domestic battery manufacturing for electric vehicles.
Roller Bearing Co. of America, Inc.	\$ 4,155,000	Wind Turbines	Houston	TX	Oxford	CT	Roller Bearing Company of America, Inc will produce turbine blade and yaw bearings; both of which will be used in wind turbines. The blades are attached to a hub by large pitch bearings which facilitate movement allowing optimal performance with varying wind conditions. Yaw bearings allow the nacelle to be directed into the wind allowing more efficient conversion of wind into electricity. The resulting technologies will aid domestic production of wind turbines and renewable wind energy.
S&C Electric Company	\$ 4,157,400	Wind Turbines	Oxford	CT	Oxford	CT	Roller Bearing Company of America, Inc will produce turbine blade and yaw bearings; both of which will be used in wind turbines. The blades are attached to a hub by large pitch bearings which facilitate movement allowing optimal performance with varying wind conditions. Yaw bearings allow the nacelle to be directed into the wind allowing more efficient conversion of wind into electricity. The resulting technologies will aid domestic production of wind turbines and renewable wind energy.
Saint Gobain Solar Glass NA	\$ 8,100,000	Solar CSP	Scottsdale	AZ	Scottsdale	AZ	Saint Gobain Solar Glass NA will manufacture mirrors used in concentrating solar power (CSP) technology that involves directing the light onto photovoltaic cells or other solar thermal generating technologies. The resulting product will help aid in domestic solar technologies manufacturing.
Schaff Steel Company	\$ 7,073,316	Wind Towers	Bismarck	ND	Phoenix	AZ	Schaff Steel will construct a wind turbine tower manufacturing facility with a planned capacity of 300 wind towers per year.
Serious Materials Inc	\$ 548,100	Buildings	Chicago	IL	Sunnyvale	CA	Serious Materials Inc is manufacturing highly insulating, high performance fiberglass windows. The resulting product will be cost-efficient and will promote energy efficiency.
Sharp Electronics Corp	\$ 1,650,000	Solar CSI	Memphis	TN	Memphis	TN	Sharp Electronics Corp will expand current solar manufacturing operations by installing a new crystalline photovoltaic module production line (E-Line) within its current solar facility. The resulting product will be a cost-efficient source of renewable solar energy.
Shaw Modular Solutions, L.L.C.	\$ 10,800,000	Nuclear	Lake Charles	LA	Lake Charles	LA	Shaw Modular Solutions LLC will fabricate modules used in advanced, passively-safe, nuclear stations which avoid GHG emissions. The resulting product will aid the domestic nuclear energy industry.
Siemens Energy Inc.	\$ 3,450,900	Wind Blades	Fort Madison	IA	Orlando	FL	Siemens Energy Inc. will build a new manufacturing plant for assembly of wind turbine nacelles and hubs for Siemens wind turbines. The resulting products will aid the domestic wind power industry.
Siemens Energy Inc.	\$ 4,331,700	Wind Towers	Hutchinson	TX	Orlando	FL	Siemens Energy Inc. will expand a wind turbine blade manufacturing facility. The expanded facility will be capable of producing both 45 meter and 49 meter blades for the Siemens SWT-2.3mw wind turbine. The resulting product will aid the domestic wind power industry.
Siemens Industry, Inc.	\$ 28,328,379	Wind Turbines	Elgin	IL	Elgin	IL	Siemens Industry, Inc will manufacture the mechanical drives, gears, pinions, and other components for gear boxes for wind turbines. The resulting product will aid the domestic wind power industry.
Solar Power Industries, Inc.	\$ 3,756,000	Solar CSI	Belle Vernon	PA	Belle Vernon	PA	Solar Power Industries will produce multicrystalline cells up to 156mm by 156mm in size, which will then be integrated into solar modules. The resulting products will aid the domestic solar energy industry.
Solar Power Industries, Inc.	\$ 1,611,083	Solar CSI	Belle Vernon	PA	Belle Vernon	PA	Solar Power Industries Inc will focus processes on high purity silicon ingot casting, slicing, and cell processing operations to produce silicon bricks, wafers, solar power systems, and solar module components. The resulting product will aid the domestic solar energy industry.
Solar Strategies, Inc.	\$ 1,572,236	Buildings	Middleburg	PA	Philadelphia	PA	Solar Strategies will re-equip a modular home facility to produce net zero-energy homes. By combining energy conservation techniques, energy producing technologies, smart metering, Energy Star-rated appliances, and energy management systems, the company aims to produce thousands of solar modular homes that generate more power than they consume over the course of a year. The resulting homes will promote energy efficiency in the residential construction industry.
SolarWorld Industries America Inc.	\$ 82,200,000	Solar Components and Materials	Hillsboro	OR	Hillsboro	OR	SolarWorld Industries America Inc. will expand the existing 100 MW solar PV manufacturing plant to 500 MW. The facility focuses on crystal growing, wafering, cell and module production. The resulting product will aid the domestic solar power industry.
Southwire	\$ 2,211,000	Smart Grid	Carrollton	GA	Carrollton	GA	Southwire will re-equip a facility for new manufacturing lines to produce cables optimized specifically for wind and solar applications that will extend the grid to allow for collection of power within renewable energy systems. The resulting technologies will aid SmartGrid capacity and technology.

Spire Semiconductor, LLC	\$ 2,044,500	Solar PV	Hudson	NH	Hudson	NH	NH	Spire Semiconductor, LLC will manufacture a very high efficiency concentrator Photovoltaic (CPV) Cell and Receiver Assembly (CRA) to be incorporated into CPV systems. The resulting technology will aid the domestic solar energy industry.
Stion Corporation	\$ 37,500,000	Solar PV	San Jose	CA	San Jose	CA	CA	Stion Corporation will manufacture high efficiency (11-12%+) CIGS thin-film photovoltaic modules on glass. The resulting technology will aid the domestic solar energy industry.
Stirling Energy Systems, Inc	\$ 9,831,000	Solar CSP	Livonia	MI	Livonia	MI	MI	Stirling Energy Systems, Inc will produce Azimuth drives used to track the sun for the SunCatcher, a 25 kW solar dish. The resulting technologies will aid Solar Concentrating Solar Power industry domestically.
Stirling Energy Systems, Inc	\$ 642,000	Solar CSP	Ashville	NY	Springville	NY	NY	Stirling Energy Systems, Inc will produce pedestals, hubs, facet support structures, booms and mirror facets that combine to serve as the radial solar concentrator dish structure of the SunCatcher, a 25 kW solar dish. The resulting technologies will aid Solar Concentrating Solar Power industry domestically.
STR, Inc.	\$ 829,020	Solar PV	Components and Materials	Somers	CT	Somers	CT	STR, Inc. will manufacture encapsulants that are specialty extruded sheets and film that hold a solar module together and protect the embedded semiconductor circuit. The resulting technologies will aid the domestic solar PV panel manufacturing industry.
Sumco Phoenix	\$ 731,207	Solar Components and Materials	Phoenix	AZ	Phoenix	AZ	AZ	Sumco Phoenix will slice, clean, and inspect and inspecting silicon wafers. These silicon wafers will then be sold for integration into solar power modules. The resulting technologies will aid the domestic solar power industry.
Sumco Phoenix	\$ 2,674,236	Solar Components and Materials	Albuquerque	NM	Albuquerque	NM	NM	Sumco Phoenix will be manufacturing and shaping silicon solar blocks. These silicon blocks will then be sent for further processing into solar wafers and sold to solar equipment manufacturers. The resulting technologies will aid the domestic solar technologies manufacturing industry.
SunEarth, Inc.	\$ 288,600	Solar Hot Water - This panel May move with timing	Fontana	CA	Fontana	CA	CA	SunEarth, Inc will manufacture liquid flat plate solar thermal collectors, for medium temperature domestic water heating and industrial processes and will manufacture standard and custom rolled and ultrasonically welded absorber plates and fin-tubes. The resulting technologies will be used in energy efficient solar hot water heaters.
Suniva, Inc.	\$ 5,700,000	Solar CSI	Norcross	GA	Norcross	GA	GA	Suniva Inc. will manufacture monocrystalline silicon-based solar cells. The resulting technologies will aid the domestic solar power industry.
Suntech	\$ 2,105,848	Solar CSI	Tempe	AZ	Tempe	AZ	AZ	Suntech will manufacture a line of poly-crystalline solar modules as well as its new "Pluto" modules.
Texas Instruments Incorporated	\$ 51,450,000	Buildings	Richardson	TX	Dallas	TX	TX	Texas Instruments will re-equip a facility and purchase equipment to produce 300nm wafers for advanced power management semiconductors.
The Dow Chemical Company	\$ 2,220,000	Solar PV	Findlay	OH	Findlay	OH	OH	Dow's plant will produce special coatings for use in solar cell manufacture. The "films" are used to laminate cell components together to form a rigid structure, offering significant benefits to solar cell manufacturers.
The Dow Chemical Company	\$ 17,814,621	Solar PV	Midland	MI	Midland	MI	MI	Dow will produce photovoltaic cells built into residential and commercial roofing and siding products. Dow's technology imbeds solar cells into shingles, sidings, and other materials, enabling lower production and installation costs.
Think North America, Inc.	\$ 16,970,145	Vehicles	Bristol	IN	Dearborn	MI	MI	Think North America will establish a U.S. manufacturing operation/facility (a vehicle assembly operation as well as facilities for fabricating vehicle components) for the Think City light-weight EV-dedicated vehicle for sale throughout North America.
Tindall Corporation	\$ 16,750,500	Wind Towers	Newton	SC	Spartanburg	SC	SC	Tindall Corporation will build a facility to manufacture concrete tower bases and concrete towers for wind turbines, which will help provide more efficient wind energy production.
TPI Composites, Inc.	\$ 3,902,921	Wind Blades	Newton	IA	Newton	IA	IA	TPI is expanding its manufacturing facility in order to fill the anticipated greater demand for composite wind turbine blades from its customer General Electric and GE's wind farm customers.
United Technologies Corporation	\$ 110,400,000	Industrial	Middletown	CT	East Hartford	CT	CT	TPI will operate a new manufacturing facility to produce the next generation wind turbine blades made by combining reinforcing fibers from glass or carbon, resin, foam, and balsa wood.
UTC Power Corp.	\$ 5,300,100	Fuel Cell	South Windsor	CT	South Windsor	CT	CT	United Technologies' Pratt & Whitney will re-equip existing manufacturing facilities for the production of a jet engine, the Pure Power® PW 1000G. The resulting engine will increase and promote greater fuel efficiency.
Vela Gear Systems, Inc.	\$ 11,604,440	Wind Turbines	Indianapolis	IN	Indianapolis	IN	IN	UTC-Power will open a new manufacturing facility to produce a clean, efficient and reliable fuel-cell powerplant offering more than twice the efficiency of traditional energy sources, while maintaining a low sound and emissions profile.
Vestas Blades America, Inc	\$ 21,569,200	Wind Blades	Brighton	CO	Brighton	CO	CO	Vela Gear will build a plant to produce advanced wind turbine parts with improved technology. The facility will produce large precision gear sets designed specifically for the wind industry.
Vestas Blades America, Inc								Vestas Blades produces blades for wind turbines used in the production of wind energy. The utility-scale blades, which convert wind into mechanical motion, are approximately 44 meters in length.

Vestas Blades America, Inc.	\$ 8,580,600	Wind Blades	Brighton	CO	Brighton	CO	Vestas Blades will produce blades for wind turbines used in the production of wind energy. The utility-scales blades, which convert wind into mechanical motion, are approximately 44 meters in length.
Vestas Towers America, Inc.	\$ 21,600,000	Wind Towers	Pueblo	CO	Pueblo	CO	Vestas Towers will produce tubular wind towers that support wind turbines at heights ranging from between 80 and 95 meters above ground.
W.L. Gore & Associates, Inc.	\$ 604,350	Industrial	Elkton	MD	Newark	DE	W.L. Gore will retrofit a manufacturing facility with next-generation equipment used to produce a key component of fuel cell systems that will be used to improve fuel efficiency in vehicles and other applications.
W.L. Gore & Associates, Inc.	\$ 240,900	Fuel Cell Components and Materials	Elkton	MD	Elkton	MD	W.L. Gore will re-equip two manufacturing facilities in New York and Maryland to produce the Gore Turbine Filter, a technology for gas turbines that delivers higher efficiency and lower greenhouse gas emissions.
Wacker Polysilicon North America LLC	\$ 128,482,287	Solar Components and Materials	Charleston	TN	Charleston	TN	Wacker Polysilicon's manufacturing plant will produce roughly 10 metric tons of pure polysilicon annually. One hundred percent of the output will be for the photovoltaic solar cell market.
Waukesha Electric Systems, Inc.	\$ 12,450,000	Smart Grid	Waukesha	WI	Waukesha	WI	Waukesha will expand an existing plant to produce very large, high-voltage power transformers. The company anticipates that more than 80 percent of them will be used to help bring renewable energy to distant load centers or to replace aging, less efficient transformers.
Wausaukee Composites, Inc.	\$ 930,810	Wind Turbines	Wausaukee	WI	Wausaukee	WI	Wausaukee Electric Systems will manufacture fiberglass wind turbine components.
Winergy Drive Systems Corp.	\$ 12,786,000	Wind Turbines	Elgin	IL	Elgin	IL	Winergy will build a new facility to manufacture power transmission equipment and gearboxes for wind turbines. The facility will enable Winergy to produce 100 percent of its gear units domestically.
Xunlight Corporation	\$ 34,500,000	Solar PV	Toledo	OH	Toledo	OH	Xunlight's first product is a flexible and lightweight photovoltaic solar energy module, which uses thin film silicon-based solar cells and can be rolled for shipping. This product was designed for easy application on rooftops.
Yingli Green Energy Americas	\$ 4,534,320	Solar CSI	Phoenix	AZ	Phoenix	AZ	Yingli plans to open a manufacturing facility to produce its solar energy modules in order to better serve its US customer base.
ZF Steering Systems, LLC	\$ 28,580,000	Vehicles	Florence	KY	Florence	KY	ZF Steering plans to re-equip its manufacturing facility in order to increase its production of welded and fabricated component kits used in 2MW and 3MW wind turbines.

Report of the Tennessee Advisory Commission on Intergovernmental Relations

**Encouraging More Cooperation
and Accountability in Payment
in Lieu of Tax Agreements**

January 2018

Executive Summary: Balancing the Needs of Local Governments, Businesses, and the Public

Businesses in Tennessee made payments in lieu of ad valorem taxes (PILOTs) totaling \$75.7 million in 2016 for tax exempt properties they lease from local industrial development boards (IDB). Although businesses can negotiate PILOT agreements with IDBs equal to the taxes they would otherwise owe if they owned the properties themselves, in practice the payments can be for less and vary by agreement—total payments in 2016 were equal to approximately 47% of the taxes that would have otherwise been owed based on the 2016 assessed value of the property, including any improvements made by the businesses. As a result, PILOT agreements often function as indirect property tax abatements that are used by IDBs and their affiliated local governments to encourage economic development.

While stakeholders interviewed generally support the use of PILOT agreements to encourage businesses to invest in Tennessee, conflicts arise over the details of individual agreements and the process for negotiating them. This was the case in Pigeon Forge and Sevier County in 2015, when the city's IDB negotiated a PILOT agreement with a Publix grocery store, abating not only the business's city property taxes but also its county property taxes for a 20-year period. Sevier County's mayor has expressed concern that PILOT agreements like this one could reduce local governments' ability to fund public education and other services that are supported by property tax revenues and that the terms of the abatements in some PILOT agreements are too long. But like IDBs for other local governments in Tennessee that levy their own property taxes, Pigeon Forge's IDB was not required to seek the county's approval before agreeing to the PILOT.

In response to the concerns raised by the county mayor, House Bill 1223 by Representative Hicks and Senate Bill 1362 by Senator Bailey would have prohibited municipal IDBs from entering into PILOT agreements longer than five years unless they receive approval for each agreement from the county in which they are located. Alternatively, the IDB or its affiliated municipality make annual payments to the county after the first five years of each agreement, and those payments would have to be equal to the real property taxes the county would have received based on the affected property's assessed value. Stakeholders raised concerns that the bill's restrictions applied only to city IDBs abating county property taxes and not county IDBs abating city property taxes.

Responding to the general concerns about PILOTs as well as the specific concerns with the original bill, the General Assembly passed an amended version as Public Chapter 431, Acts of 2017, which instead directs the Commission to study

PILOT agreements often function as indirect property tax abatements used to encourage economic development. While stakeholders interviewed generally support the use of PILOT agreements to encourage businesses to invest in Tennessee, conflicts arise over the details of individual agreements and the process for negotiating them.

Measuring the economic benefit of PILOT agreements is difficult because the state and local governments do not generally collect enough information to make this determination.

- the economic benefits to counties and municipalities from the use of PILOT agreements and leases by IDBs organized by municipalities;
- whether in the absence of county approval for a PILOT any economic benefits are derived from limiting the agreements length to five years or from requiring the IDB or municipality to make annual payments to the county after the first five years equal to the amount of real property taxes the county would have received based on the property's assessed value; and
- any additional issues that the Commission deems relevant.

The assumption made by IDBs concerning tax abatements is that the business would not have chosen to locate in their jurisdiction but for the agreement. If this is true, such an agreement could mean economic benefits for the community, but it is often difficult to prove. Whether or not there are economic benefits depends on a number of factors, including the assessed value of the affected property before it was acquired by the IDB, as well as any economic impacts (employment, income, business and household spending), fiscal impacts (new government revenues and new expenditures), and project impacts (direct, indirect and induced). To better ensure that local governments achieve an economic benefit from the exchange, some IDBs require proof that benefits outweigh costs before they will approve a PILOT, but unfortunately, local governments and the state don't generally collect enough information from businesses that have PILOT agreements to determine whether the incentives these businesses received have resulted in economic benefits to their communities. While collecting this information would be helpful, the state could also address some of the issues raised when an IDB representing one local government abates the taxes of another—as happened in Sevier County—both by encouraging greater cooperation among local governments in the process for negotiating PILOT agreements and by increasing transparency in this process without compromising the confidentiality necessary for conducting negotiations with private businesses.

Property Tax Incentives and Economic Development

State and local governments use a wide array of incentives to encourage businesses to invest in their communities. While these incentives are only one of many factors—including available workforce, infrastructure, and logistics—that businesses consider when determining where to locate or invest, they can be the deciding factor when making a final choice among several short-listed locations that otherwise offer similar resources or advantages.

Nationwide, the abatement of local property taxes is a common incentive at the disposal of local governments, though the types of property tax incentives that can be offered and the process for granting them vary by state

and community. For example, the Constitution of the State of Tennessee authorizes the General Assembly to exempt from property taxes only those properties held by local governments or the state that are used exclusively for public purposes and other non-government-owned properties that fall into certain narrowly defined categories—including those used exclusively for religious, charitable, scientific, literary, or educational purposes. This prohibits local governments in Tennessee from directly abating property taxes for all but a limited subset of property.

Tennessee Communities Provide Property Tax Incentives through PILOT Agreements Made by IDBs

While their ability to directly abate property taxes is limited, local governments in Tennessee can lease government-owned tax-exempt property to businesses, providing them with a form of indirect abatement. Consistent with the limits in the state's constitution, local governments acting either individually or jointly are authorized to establish IDBs that hold and lease property to businesses for a variety of purposes, many of which include uses that encourage economic development, under Tennessee Code Annotated, Section 7-53-101 et seq. The properties the IDBs own are tax exempt, and local governments can authorize IDBs to negotiate and accept PILOTs from the businesses that lease their properties. These PILOTs can help offset local government revenues lost when the properties are removed from tax rolls.

Local governments acting either individually or jointly are authorized to establish industrial development boards (IDBs) that hold and lease property to businesses.

The ultimate value of the incentive that a business receives from a PILOT agreement with an IDB is equal to the difference between any negotiated payments and the property taxes a business would otherwise owe if the property were subject to taxation.

The process for approving IDB PILOT agreements in Tennessee varies based on

- whether the negotiated payments are at least equal to the taxes that would be owed if the property were subject to taxation,
- an agreement's length, and
- the local governments involved.

State law allows local governments that have authorized their IDBs to negotiate PILOTs to require that any agreements be submitted to them for approval. For agreements where payments made to the city and county are at least equal to the taxes that would otherwise be owed, no additional approval is necessary beyond what is required by the local government or governments that created the IDB.

But for agreements where payments made to either the city or county are less than the taxes that would be owed if the property were subject to

All IDBs established by municipalities with their own property taxes may abate the property of other local governments.

taxation, additional restrictions apply depending on an agreement's length and whether the IDB that negotiated the agreement is established by a municipality without its own property tax. All PILOT agreements where payments are less than taxes owed for periods longer than 20 years—not including up to three years allowed for construction—must be approved not only according to the procedures required by an IDB's affiliated local government but also by both the Tennessee Department of Economic and Community Development and the Tennessee Comptroller of the Treasury. State approval is not required for agreements that don't exceed this threshold. Though the data is incomplete, it appears the most common length of term for a PILOT agreement in Tennessee is 10 to 15 years.

IDBs established by municipalities without their own property taxes are prohibited from entering PILOT agreements that would abate the taxes of the counties in which they are located without receiving those counties' approval for each agreement. Absent county approval, these IDBs or the municipalities that created them must agree to make payments to the affected counties equal to the property taxes that would otherwise be owed for real but not personal property, under Tennessee Code Annotated, Section 7-53-305(h). Of the 184 IDBs in Tennessee, only five are established by one of the 74 municipalities in the state that don't levy their own property taxes. Overall, 271 cities and all 95 counties in Tennessee have their own property taxes.

In contrast, IDBs established by local governments—whether city, county, or both—that levy their own property taxes are not required to seek the approval of other governments affected by their PILOT agreements. Nor are they required to share with other affected tax jurisdictions any PILOTs made pursuant to their agreements. As a result, it is possible for IDBs established by some local governments in Tennessee to enter PILOT agreements that abate the property taxes of other local governments or special school districts without those tax jurisdictions' consent.

Encouraging Cooperation on PILOT Agreements Can Reduce Conflict among Local Governments

The ability of some local governments' IDBs to abate the property taxes of other jurisdictions can cause conflicts, as was the case between Pigeon Forge and Sevier County in 2015 discussed above. Several stakeholders have also expressed concern that local property taxes foregone in PILOT agreements can create revenue shortfalls that either result in cuts to public services or have to be made up from other local revenue sources so local governments can maintain compliance with state law. For education, for example, the state's "maintenance of effort laws ensure that local funds budgeted for schools do not decrease as state funding for schools increases. County commissions, city councils and special school districts must budget

附件 11

DESCRIPTIVE STATISTICS FOR TAX INCENTIVE PROGRAMS

2015 Report to the Legislature
Covering Calendar Year 2014 Activity

Vikki Smith, Director
Washington State Department of Revenue

**BUSINESS AND OCCUPATION TAX RATE REDUCTION
SOLAR ENERGY SYSTEMS**

Under RCW 82.04.294, a preferential B&O tax rate of 0.275 percent is available for the manufacturing of solar energy systems using photovoltaic modules or stirling converters, or of manufacturing solar grade silicon, silicon solar wafers, silicon solar cells, thin film solar devices, or compound semiconductor solar wafers to be used exclusively in components of such systems.

This preferential tax rate is also available to those in the business of making sales at wholesale of solar energy systems using photovoltaic modules or stirling converters, or of solar grade silicon, silicon solar wafers, silicon solar cells, thin film solar devices, or compound semiconductor solar wafers to be used exclusively in components of such systems, manufactured by that person.

"Compound semiconductor solar wafers" means a semiconductor solar wafer composed of elements from two or more different groups of the periodic table.

"Module" means the smallest non-divisible self-contained physical structure housing interconnected photovoltaic cells and providing a single direct current electrical output.

"Photovoltaic cell" means a device that converts light directly into electricity without moving parts.

"Silicon solar cells" means a photovoltaic cell manufactured from a silicon solar wafer.

"Silicon solar wafers" means a silicon wafer manufactured for solar conversion purposes.

"Solar energy system" means any device or combination of devices or elements that rely upon direct sunlight as an energy source for use in the generation of electricity.

"Solar grade silicon" means high-purity silicon used exclusively in components of solar energy systems using photovoltaic modules to capture direct sunlight. "Solar grade silicon" does not include silicon used in semiconductors.

"Stirling converter" means a device that produces electricity by converting heat from a solar source utilizing a Stirling engine.

"Thin film solar devices" means a nonparticipating substrate on which various semiconducting materials are deposited to produce a photovoltaic cell that is used to generate electricity.

This incentive expires June 30, 2017.

Chapter 3

The following data are required to be included in the descriptive statistics report for this tax incentive:

- Dollar amount of tax saved;
- Total jobs for program participants;
- Percentage breakdown of total jobs: full-time, part-time, and temporary;
- Total jobs for program participants according to annual wages paid of
 - Less than \$30,000
 - \$30,000 to \$59,999
 - \$60,000 or more; and
- Number of jobs that receive employer-provided benefits - medical, dental, and retirement - by wage band.

The information specified above is contained in the following tables of this chapter for the six businesses that claimed the tax incentive during Calendar Year 2014. Although not required by statute, some of the tables provide a breakdown of program participants by size of business, based on total Washington employment.

SALES/USE TAX DEFERRAL/EXEMPTION INVESTMENTS BY HIGH TECHNOLOGY FIRMS

The high technology deferral/exemption program was established in 1994, effective January 1, 1995. It is codified as chapter 82.63 RCW. The program provides a deferral and ultimate waiver of state and local sales and use taxes on construction of facilities and purchase of eligible machinery by firms engaged in the same five areas of high technology as the B&O tax credit (Chapter 7). These activities are:

- Advanced computing,
- Advanced materials,
- Biotechnology,
- Electronic device technology, and
- Environmental technology.

Expenditures eligible for the deferral are the construction of facilities in which research and development activities are conducted, as well as pilot scale manufacturing plants - not the actual full-scale manufacturing facilities. Acquisition of machinery necessary to conduct R&D activities also qualifies for the deferral.

The 1994 statute allowed only a deferral of the sales/use tax liability; repayment was to start the third year following completion of the facility with repayments occurring over the subsequent five years. Different repayment schedules were provided for a cancer research institute and firms that develop drugs or biological products which required FDA licensing. The following year, a provision was added which basically turned the deferral into an exemption, because the deferred taxes did not need to be repaid if the facility and/or machinery continued to be used for qualified R&D purposes for at least the following seven years.

The original law provided the deferral/exemption only for a ten-year period. In 2004, the expiration date was extended to January 1, 2015.

The 1994 statute directed the Department to perform three assessments of the program; reports were produced in 1997, 2000, and 2003. This requirement was amended in 2004 and the current accountability provisions were added to RCW 82.63.020. Now taxpayers who take the sales tax deferral/exemption must file an annual survey containing specified information, pursuant to RCW 82.32.585. The survey must be initially filed by April 30 of the year after the investment project is certified by the Department as being operationally complete. Thereafter, the taxpayer must also file the survey in each of the subsequent seven years. Based on this data, the Department compiles the summary statistics which are presented in this report.

Vikki Smith, Director
Washington State Department of Revenue

Chapter 4 - High Technology Industry

Four high technology industry incentives require a participant to submit an annual survey. This chapter shows the cumulative results for each incentive with three or more participants. Incentives not utilized or containing confidential taxpayer information are listed in the executive summary.

High technology sales and use tax deferral

Businesses engaged in certain high technology research and development activities or pilot scale manufacturing are eligible for a deferral of sales and use taxes on charges for construction, expansion, or renovation of facilities and purchases of eligible machinery and equipment. The deferral becomes a waiver of the tax if the business maintains qualified business activities for eight years. Participants submitted applications for this deferral prior to January 1, 2015. (RCW 82.63)

Incentive amount by participant size

Employment size of participant	Participants	Incentive claimed
Less than 50	27	\$5,995,364
50 to 250	33	\$24,915,198
More than 250	41	\$315,577,389
Total	101	\$346,487,951

Incentive amounts by high technology category*

High technology category	Participants	Incentive claimed
Advanced Computing	34	\$199,979,344
Advanced Materials	14	\$18,542,519
Biotechnology	42	\$92,375,791
Electronic Device	32	\$21,599,478
Environmental Tech	12	\$14,037,999
Total	134	\$346,535,130

*Totals do not agree with the above table due to rounding and participants reporting under multiple technology categories.

Chapter 5 - Renewable Energy Industry

Three renewable energy industry incentives require a participant to submit an annual survey. This chapter shows the cumulative results for each incentive with three or more participants. Incentives not utilized or containing confidential taxpayer information are listed in the executive summary.

Solar energy systems manufacturers or wholesalers B&O reduced tax rates

The B&O tax rate on manufacturing of solar energy systems or the production of silicon components for these systems is 0.275 percent until July 1, 2027. If no preferential rate existed, the rate would be 0.484 percent. (RCW 82.04.294)

Incentive amount by participant size

Employment size of participant	Participants	Incentive claimed
Less than 10	3	\$9,439
More than 10	3	\$112,089
Total	6	\$121,528

Job status by participant size

Employment size of participant	WA employees	Full-time* (%)	Part-time* (%)	Temporary* (%)
Less than 10	6	66.7	33.3	0.0
More than 10	389	98.9	1.0	0.2
Total	395	98.4	1.4	0.2

* The total percentage for the employment status may not total 100% due to participant answers.

Benefits by annual wage

Annual wage	WA employees	Medical	Dental	Retirement
Less than \$30,000	28	20	20	0
\$30,000 - \$60,000	108	97	100	64
More than \$60,000	259	248	255	237
Total	395	365	375	301

Rural county sales and use tax deferral

Manufacturers investing in qualifying counties are eligible for a deferral of retail sales and use tax on charges for the construction, expansion, or renovation of facilities and purchases of eligible machinery and equipment when those projects are located in a county based on the population density of an average of less than 100 residents per square mile or whether the county contained a CEZ. The deferral becomes a waiver of the tax if the business maintains qualified business activities for eight years. Participants submitted applications for this deferral prior to July 1, 2010. (RCW 82.60)

Incentive amount by participant size

Employment size of participant	Participants	Incentive claimed
Less than 50	66	\$15,667,293
50 to 250	43	\$13,777,339
More than 250	23	\$17,588,261
Total	132	\$47,032,893

Job status by participant size

Employment size of participant	WA employees	Full-time* (%)	Part-time* (%)	Temporary* (%)
Less than 50	1,153	81.8	15.6	2.6
50 to 250	5,134	92.3	3.0	4.6
More than 250	17,732	95.1	2.3	2.6
Total	24,019	93.9	3.1	3.0

* The total percentage for the employment status may not total 100% due to participant answers.

Benefits by annual wage

Annual wage	WA employees	Medical	Dental	Retirement
Less than \$30,000	4,077	2,162	2,048	1,909
\$30,000 - \$60,000	12,697	10,491	10,041	9,181
More than \$60,000	7,245	6,638	6,309	6,527
Total	24,019	19,291	18,398	17,617

Innovations and evidence

Employment size of participant	New products or processes	New research projects	Patents	Copyrights	Trademarks
Less than 50	105	3	0	0	6
50 to 250	45	30	1	0	21
More than 250	96	455	34	0	27
Total	246	488	35	0	54

Global Market Outlook

For Solar Power / 2018 - 2022

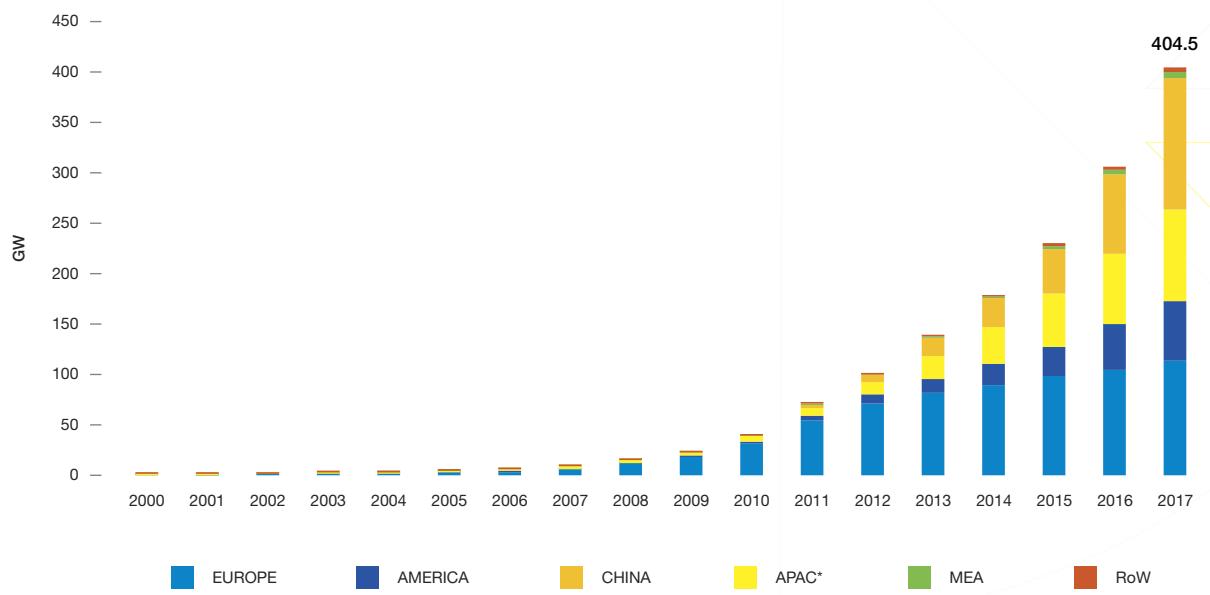

Supported by:

à GLOBAL ROLAQ MAQKES

UPDATE 2000 - 2017 / CONTINUED

FIGURE 6 EVOLUTION OF GLOBAL TOTAL SOLAR PV INSTALLED CAPACITY 2000-2017

*APAC excl. China

© SOLARPOWER EUROPE 2018

In 2017, almost as much solar was installed in one year (99.1 GW) as the world had installed in total in 2012 (100.9 GW). This led to a total global solar power capacity of over 400 GW in 2017, after solar exceeded the 300 GW mark in 2016 and the 200 GW level in 2015.

The cumulative installed solar PV power capacity grew by 32% to 404.5 GW by the end of 2017, up from 306.4 GW in 2016 (see Fig. 6). In only 10 years, the world's total PV capacity increased by over 4,300% – from 9.2 GW in 2007. From the beginning of the century, when the grid-connected solar era began with the start of Germany's feed-in tariff scheme, total solar power has grown by nearly 255 times.

The Asia-Pacific region expanded its solar market leadership in 2017. After adding 73.7 GW in 2017, it had 221.3 GW of total installed capacity, equal to a 55% global market share (see Fig. 7). After Asia-Pacific had become the largest solar-powered region in the world

in 2016, it now even owns more than half of the global power generation capacity. The European solar pioneers are still ranked second, but its share slipped to 28% based on a cumulative PV capacity of 114 GW. The American Continent remained on the third position – with a total installed capacity of 59.2 GW and a 15% stake. The Middle East and Africa lost again market share. After adding 2.1 GW in 2017, the total solar capacity of 6.9 GW equals a world market share of 1.7%.

China alone operates now nearly 1/3 of the world's solar power generation capacities (see Fig. 8). This 32.3% is a strong uptick from 2016, when China's share was 25% and it had taken over the No. 1 position as the country hosting the world's largest solar power generation fleet for the first time. Like in the previous year, China was trailed by the US and Japan. While the US overtook Japan, both lost market shares in 2017. The US' total installed capacity reached 51.5 GW, equal to a market share of 12.7%;

30%

solar global market growth
Now at 100 GW a year

FIGURE 7 EVOLUTION OF TOTAL INSTALLED GLOBAL SOLAR PV CAPACITY 2012-2017

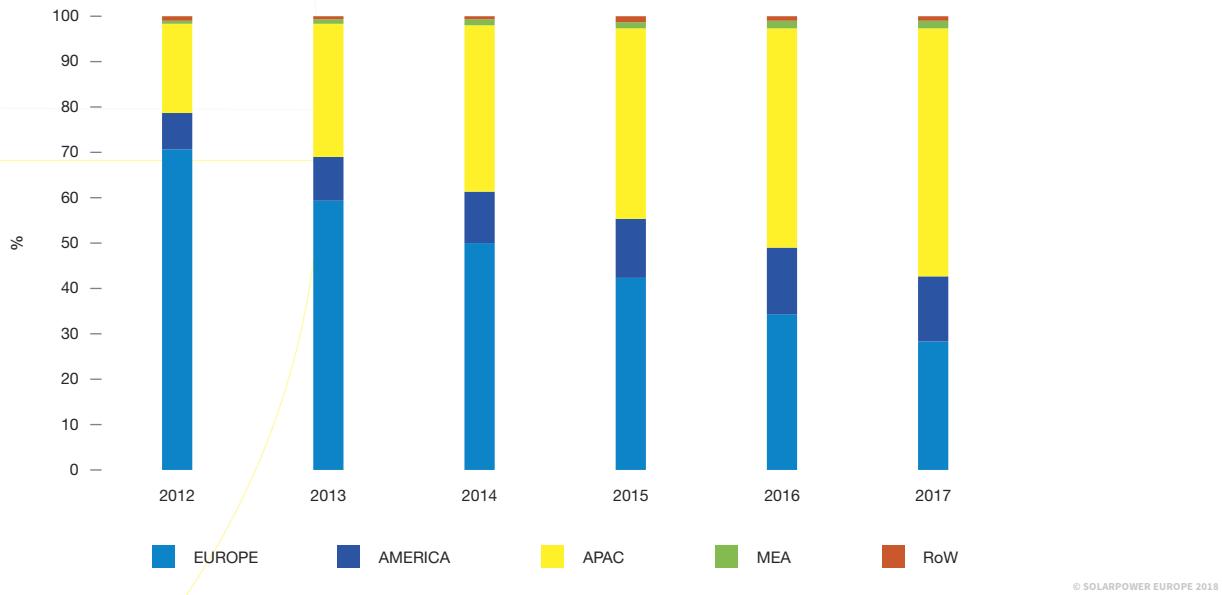

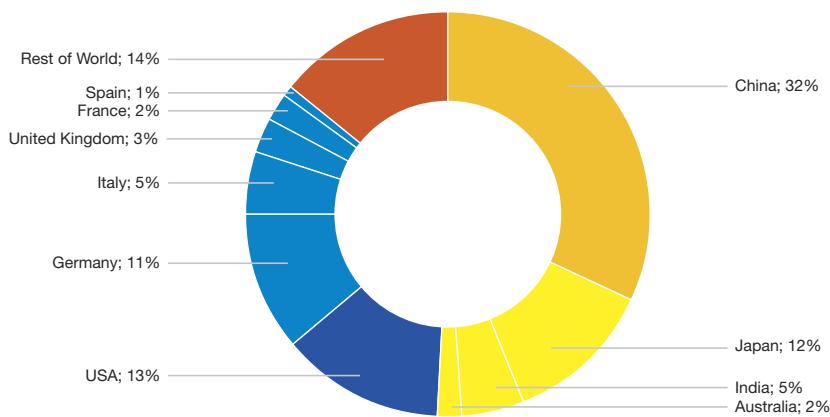

FIGURE 8 GLOBAL TOP 10 SOLAR PV MARKETS TOTAL INSTALLED SHARES BY END OF 2017

Japan's 49.3 GW resulted in a 12.2% global share, compared to 14% and 13.8% in 2016, respectively. In 2017, again no European country was among the top 3 solar power generating countries. Though Germany could defend its fourth rank as the only other country with a two-digit global share, its comparatively low 2017 installations of 1.8 GW mean a drop in market share down to 10.6%, from 13.4% in 2016. The new addition in the top 5 and first time above the 10 GW solar generation capacity

level is India, which doubled its total PV capacity in 2017 to 19 GW and a 4.7% market share.

The further two countries with solar capacities exceeding 10 GW at the end of 2017 were again Italy at 19.4 GW and the UK at 12.7 GW. All other countries in the top 10 have installed volumes that are somewhat distant from the 10 GW mark – France (8 GW), Australia (7.3 GW) and Spain (5.6 GW) – and are unlikely to reach that level in 2018, according to our estimates.
